Air Seeder Diffusers - D-Cup

D-CUP Diffusers remove the *speed* from the air-seed mix in the very last stage of distribution. Gravity will then gently drop the Seed (and/or fertiliser) through the final 16 inches (approx.) of the delivery and boot assembly. Better, more even germination can result through reduced seed bounce and more accurate seed placement.

D-Cup Diffusers can help to visually identify boot blockages from the tractor cab.

DF110 D-CUP Diffuser **Single** hose Inlet set - NO mount clamp assy.

DF110 D-CUP Diffuser
Single hose Inlet set

DF210 D-CUP Diffuser **Twin** hose Inlet set -NO mount clamp assy. Including one new extension body clamp set.
