G'Day Valued Dealer Network. In This Months May Update We Will Look At The Janke System.

We have replaceable points to suit Janke and Boss machines that use the Janke style holders. **These points are cast from a quality Ni Hard material.** This material is extremely hard wearing and doesn't require any agtuff wear enhancement to increase the life of the point. The smooth finish on the point makes it easier to pull through the ground as it doesn't have the rough surface from tungsten grit or extra hardfacing welds, the smooth surface will not catch and drag small root fibres and weeds.

JAN 01

The standard point JAN 01 is 36mm wide and has a 13mm square tungsten tile fitted to the nose. We have a Knife point style point JAN 02 It is 30mm longer and deeper than the JAN 01. This point is 12mm wide at the leading edge and has 3 tungsten tiles fitted to this edge, the lower tile is 4mm thick.

The JAN04 has a 20mm longer nose than the Jan 01 and is 25mm wide. There is also a tungsten tile on the lower edge.

Each new point is supplied with a nylon bush (JAN 301) and a new shear pin (JAN 300) to save ordering extra parts.

JAN 02

Shear Pin
