## G'Day Valued Dealer Network, In This Months December Update We Will Look At Product Branding.

**Beware Of Cheap Imitations, Always ask for Agpoint branded Products.**

All items manufactured in the Freeling factory South Australia are stamped with the Agpoint logo, part number and a manufacturing date stamp. The **A** in Agpoint has been carried over from Anders & Sons who originally started forging sweeps for machinery that they sold. The heavy forging facility has been operating in the same yard since 1865.

The time of manufacturing date stamp is similar to a clock, the year of manufacture is stamped in the centre and the month of manufacture is indicated by the number of indentations around the outside of the year number in a circle pattern. It starts with 12 indentations for the month of January and then 1 indentation is removed for each additional month so that there is only 1 indentation left indicating the month of manufacture is December.

All of the discs and coulters that we supply are painted black and are stamped with the Agpoint logo below or McCoy. Beware of imitations and copies, these cheaper discs may not last as long as the Agpoint branded parts. High quality boron steel is used in these parts and is hardened to our rockwell specifications to increase the working life of the part.
